

AUTODESK BIM COLLABORATION PRO

CSG Training Centre | Authorized Autodesk Training Centre | Certiport Authorized Testing Centre

FOR WHOM

Construction and Build Professionals, Sub-Contractors, Main-Contractors of all disciplines.

PRE-REQUISITION

Experience in managing a building and construction project.

DURATION | VERSION

1 DAY, Latest version available

COURSE OBJECTIVES

Autodesk® BIM Collaborate Pro is cloud-based design collaboration and coordination software that connects AEC teams. It helps the project team to execute on design intent and deliver high-quality constructible models on a single platform. It also adds cloud collaboration capabilities for model co-authoring (includes Revit Cloud Worksharing and Collaboration for Revit).

This software will allow the project team members' productivity to be improved, reduces rework, and accelerates project delivery through real-time Revit cloud worksharing and collaboration. It is a powerful tool which manage your models, documents and tasks better by connecting your teams, data, and workflows.

Upon completing this course, users will be able to do project setup and administration as well as the necessary knowledge on working together in a cloud-based environment.

COURSE TOPICS

BIM Collaboration Pro

1. User interface Introduction
2. Project Setup and Administration
3. Collaboration for Revit: Live Revit Collaboration on cloud
4. Design Review (issue & coordination): Reviewing the design, create markup, and create issue using web interface
5. Design Collaboration for Revit: Sending package and approval
6. Model Coordination: Clash Detection
